THE PROBLEM

Enterprise AI sales stall between the demo and the contract. The technology is good. The buyer is convinced. The deal dies in procurement, in change management conversations, in the question: "What happens to our people?" The sales motion doesn't account for the organizational human.

WHAT I'VE SEEN

\$500M+ in enterprise programs. 15+ industries. 52 countries. 100% government RFP shortlist rate across two firms. VP Solution Architecture at MTX Group (\$40M annual revenue targets). Technical Consulting Director at CGI (\$12B global consultancy). The pattern that kills enterprise AI deals is the same everywhere: the sales team sells features. The CIO buys outcomes. The gap between them is organizational — not technical.

THE ENGAGEMENT

Six weeks. \$40,000. Deliverable in hand.

Week 1–2: Diagnostic — Sales motion audit, rep interviews, collateral review, competitive intelligence assessment. Deliverable: Current State Assessment + Friction Map (where deals die and why).

Week 3–4: Architecture — Enterprise sales framework, competitive displacement playbook (40-60 pages), discovery question bank (100+ questions), demo choreography, ICP scoring matrix. Deliverable: The Displacement Playbook.

Week 5: Build — 8 competitive battlecards, 5 buyer persona profiles with objection matrices, AI-native sales process map with prompt templates for the team. Deliverable: Sales Enablement Toolkit.

Week 6: Handover — Full diagnostic report, 2-hour team enablement session (recorded for future hires), 90-day execution plan, measurement dashboard, hiring recommendation for the VP seat. Deliverable: Complete Handover Package.

THE ROI

4 reps × \$2M quota = \$8M team target. At ~20% win rate against ServiceNow, ~40 deals lost/year. +10pp win rate improvement = \$2.76M incremental ARR. Investment: \$40K. Return: 69:1. The playbook pays for itself with a single deal that would have otherwise been lost to the incumbent.

THE OPTION

Convert to 90-day fractional engagement at \$25,000/month. Or: take the playbook and run it yourself. Either way, you have the work.

THE CHANNEL DEAL

Kombra Group publishes professional development workbooks for every role affected by enterprise AI deployment. Three titles in production now:

The AI-Adjacent Professional — A workbook for figuring out what you're still here to do

The Implementation Partner's Field Guide — How to deploy technology into a human organization without losing either

The Change Leader's Workbook — Leading your team through a transformation you didn't design

Every enterprise AI deployment creates a workforce that needs structured support. 100 deployments/year × 1,175 employees × \$8 wholesale = \$940K/year recurring channel revenue. The consulting engagement builds the displacement playbook. The book channel provides the adoption tools.
